Handwritten notes on a grid background. At the top, there's a graph of a curve in the first quadrant. Below it, there are several mathematical problems and solutions involving integrals and derivatives. One problem asks to solve $xe^x = y \frac{dy}{dx}$. Another involves finding the area under a curve.

Handwritten notes on lined paper. It starts with the differential equation $xe^x = y \frac{dy}{dx}$. The student separates variables to get $xe^x dx = y dy$. They then integrate both sides: $\int xe^x dx = \int y dy$. The solution for the integral of xe^x is shown as $x e^x - e^x + C$. The final answer is $y = \sqrt{2x^2 e^x - 2e^x + C}$.

Handwritten notes on lined paper. The main topic is arc length. It starts with the general formula for arc length: $arc\ length = \int_{t_1}^{t_2} \sqrt{\left(\frac{dx}{dt}\right)^2 + \left(\frac{dy}{dt}\right)^2} dt$. A diagram shows a curve in the first quadrant with a small segment highlighted, forming a right triangle with sides Δx and Δy and hypotenuse Δs . The arc length is labeled as the sum of these small segments.

Example 1: $x = 5 \sin t$, $y = 5 \cos t$, for $0 \leq t \leq 2\pi$. The student calculates the arc length as $\int_0^{2\pi} \sqrt{(5 \cos t)^2 + (-5 \sin t)^2} dt = \int_0^{2\pi} 5 dt = 10\pi$.

Example 2: Approximate with $\sum \sqrt{\Delta x^2 + \Delta y^2}$. The student shows two ways to approximate the arc length: one using Δt and one using Δx .

Small handwritten notes on a grid background, possibly a continuation of the arc length or calculus topics.

Does ap calc bc have a formula sheet. Best calculator for ap calculus bc. Ap calc bc exam length.
